Grow Together

WORKPLACE GIVING CAMPAIGN

2026 Workplace Giving Impact Report

One of the priorities of our annual workplace giving campaign is to build up our distinctive Give Together, Grow Together fund to support staff and physician-led initiatives that benefit patient care at EvergreenHealth. When we give together, we grow together. Discover just a few of the recent patient-centered investments supported by your giving.

Technology that powers better patient outcomes

More physical therapy patients can now benefit from high-intensity exercise results, with low-intensity effort after the department acquired a second Delfi system for personalized blood flow restriction training (PBRT) with donor support.

Training in a new evidence-based method for treating suicidality

Donors helped 20 behavioral health staff receive training in the Collaborative Assessment and Management of Suicidality (CAMS) framework for crisis intervention. The CAMS framework helps providers better evaluate a patient for risk of suicidal ideation and has been shown to help in about 6-8 sessions—a truly lifesaving investment.

Fall prevention initiative

To reduce the number of falls among hospitalized patients at EvergreenHealth, one group received a grant to launch an education campaign for providers and patients. The comprehensive initiative features an educational video to play on hospital television, “Call Don’t Fall” badges for staff, “Stay With Me” armbands for high-risk patients and more.

Improvements to IV placement training

Philanthropy supported the purchase of five RediStick Peripheral IV Placement trainers for EvergreenHealth nursing residents. This evidence-based technology strengthened clinical excellence and enhanced patient care throughout the hospital.

Height-adjustable hand therapy table

Hand therapy providers and patients now benefit from using a clinician-designed, height-adjusted hand therapy table to enable sound ergonomics and proper alignment. The table is also used for manual therapy, splint fabrication and more.

Translating forms for EvergreenHealth Hospice Care

To improve access to information about hospice care, the department translated essential forms into Spanish, Russian, Vietnamese and Chinese/Cantonese.
